

How do I locate the Wi-Fi MAC address on my Android device?

The Media Access Control (MAC) address is a unique 12-character identifier (e.g. **00:00:00:00:00:0X**) for a specific piece of hardware, like the network adapter located in WiFi devices.

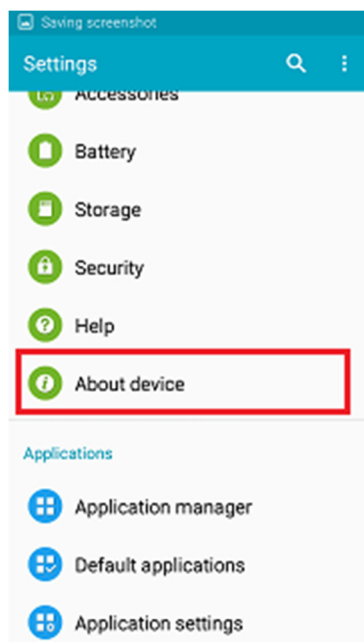

1. From the standby screen, tap **Apps**.

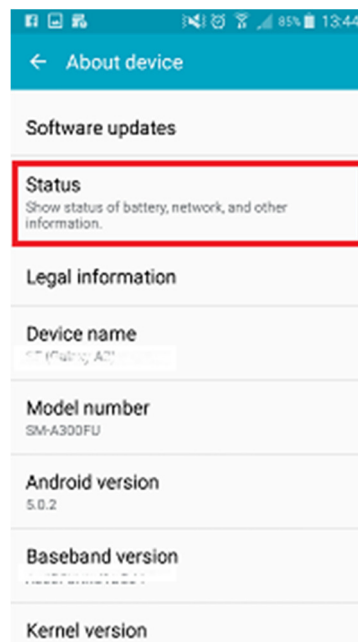

2. Select **Settings**.

3. Select **About device**.

4. Select **Status**.

5. Scroll down to **Wi-Fi MAC address**.

Note: If you long press the text will be copied to your clipboard
